For more than twenty years Parker Fabrication, Inc has been producing high quality, cost effective, components and fabricated assemblies for customers that vary from Fortune 100 International OEM manufacturers to the local consumer.

## **Parker Fabrication, Inc.**

Low cost, Great Products. Quality and service are only two of the factors in what we call the "value triangle." The third critical component is price.

Semiconductor device fabrication is the process used to create the integrated circuits that are present in everyday electrical and electronic devices. It is a multiple-step sequence of photolithographic and chemical processing steps during which electronic circuits are gradually created on a wafer made of pure semiconducting material. Silicon is almost always used, but various compound ...

A microlens is a small lens, generally with a diameter less than a millimetre (mm) and often as small as 10 micrometres ( $\mu\text{m}$ ). The small sizes of the lenses means that a simple design can give good optical quality but sometimes unwanted effects arise due to optical diffraction at the small features. A typical microlens may be a single element with one plane surface and one spherical convex ...

Tube Fabrication Services. At H & H Tube, we specialize in the fabrication of custom tubular products for the automotive, medical, HVAC, and other manufacturing industries. Our capabilities include the production of complex, small-diameter tubing and components that require a high degree of precision.

The inherent specificity and electrochemical reversibility of enzymes poise them as the biorecognition element of choice for a wide range of metabolites. To use enzymes efficiently in biosensors, the redox centers of the protein should have good electrical communication with the transducing electrode, which requires either the use of mediators or tedious biofunctionalization approaches.

Posted: May 06, 2014: Low-cost nanotechnology water filter (Nanowerk Spotlight) The effluents of tannery, paint, paper and textile industries containing different type of dyes are often discharged untreated into water bodies. The No. 1 polluter (after agriculture) of clean water is the textile industry, one of the most chemically intensive industries on the planet (read more: "Textile dyeing ...
