Data Mining i About the Tutorial Data Mining is defined as the procedure of extracting information from huge sets of data. In other words, we can say that data mining is mining knowledge from data.

### **About the Tutorial**

Text mining, also referred to as text data mining, roughly equivalent to text analytics, is the process of deriving high-quality information from text.High-quality information is typically derived through the devising of patterns and trends through means such as statistical pattern learning.Text mining usually involves the process of structuring the input text (usually parsing, along with the ...

- Hi I'm Bart Poulson and I'd like to welcome you to Techniques and Concepts of Big Data. Big Data refers to data that because of its size, speed or format, that is, its volume, velocity or variety, cannot be easily stored, manipulated or analyzed with traditional methods like spreadsheets, relational databases or common statistical software. We'll take a look at a practical definition of Big ...

In applied mathematics, topological data analysis (TDA) is an approach to the analysis of datasets using techniques from topology.Extraction of information from datasets that are high-dimensional, incomplete and noisy is generally challenging. TDA provides a general framework to analyze such data in a manner that is insensitive to the particular metric chosen and provides dimensionality ...

Papers by Keogh and collaborators that use SAX. (in random order) In [1] we show how to use SAX to find time series discords which are unusual time series. In [2] we consider a special case of SAX, which has an alphabet size of 2, and a word size equal to the raw data, and show that we can use this bit-level representation for a variety of data mining tasks.
