Layers of Learning - YouTube

Much learning in life takes place in informal environments outside the classroom. We envision this Guide being of value wherever kids and adults find themselves together and excited about learning. Before getting started, we strongly urge adults to read the "Tips to Guide Your Child's Enjoyment of Learning" (p. 4).

For kids ages 6-13 and the adults they learn with!

For over a million years, the soil of the Earth has been developing. Weather has played an important role in shaping the soil. The top rocky layer of the Earth has been ground down into smaller and finer grains. Plants and animals (mostly insects) have helped to deposit nutrients. An important part of the soil is the living part. Bacteria (any

The mantle is the layer just below the lithosphere and is the thickest layer. It is made up of mostly rock. It is hot and also convecting, meaning that the mantle's heat can be transferred to the lithosphere. Every year, lithospheric plates, or our continents, move at rates of centimeters per year in response to movement in the mantle.
