Linear programming (LP, also called linear optimization) is a method to achieve the best outcome (such as maximum profit or lowest cost) in a mathematical model whose requirements are represented by linear relationships. Linear programming is a special case of mathematical programming (also known as mathematical optimization).. More formally, linear programming is a technique for the ...

In mathematics, the relaxation of a (mixed) integer linear program is the problem that arises by removing the integrality constraint of each variable.. For example, in a 0-1 integer program, all constraints are of the form $\sum_{i \in I} a_i x_i \leq b$. The relaxation of the original integer program instead uses a collection of linear constraints $\sum_{i \in I} a_i x_i \leq b$. The resulting relaxation is a linear program, hence the name.

Linear Programming Linear programming is often a favorite topic for both professors and students. The ability to introduce LP using a graphical approach, the relative ease of the solution method, the widespread availability of LP software packages, and the wide range of applications make LP accessible even to students with relatively weak mathematical backgrounds.
