Design work on the Tsar Bomba started from autumn 1954 to autumn 1961 (with a two-year break from 1959-1960). A 100-megaton nuclear bomb was also under development in NII-1011 at this time. This somehow contradicts partially with the official history of the institute (now the All-Russian Scientific Research Institute Of Technical Physics); the official history stated that the Ministry of ...

A clock is an instrument used to measure, keep, and indicate time. The clock is one of the oldest human inventions, meeting the need to measure intervals of time shorter than the natural units: the day, the lunar month, and the year. Devices operating on several physical processes have been used over the millennia. Some predecessors to the modern clock may be considered as "clocks" that are ...

Some planes in the sky leave trails that persist and spread, and other planes, in the same sky, leave short-lived trails, or no trails at all. These trails are actually called contrails, short for "condensation trails". They are not smoke from the engines, they are formed when the water in jet exhaust (and there's quite a lot of it, like car exhaust on a cold day) mixes with wet cold air ...

### **Why do some planes leave long trails, but others don't**

Laypersons are no doubt confused by all of our recent esoteric discussions regarding radiative transfer, and whether global warming is even possible from a theoretical standpoint. So, let's take a break and return to the real world, and the experiments you can do yourself to see evidence of the ...

As a follow-up to my controversial post on the effect of infrared "back radiation" downwelling from the colder sky to the warmer surface, the existence of which some dispute (despite the real-time availability of such data), I've come up with an experimental setup to see how IR radiation from the sky influences air temperature near the ground.
